

APPENDIX

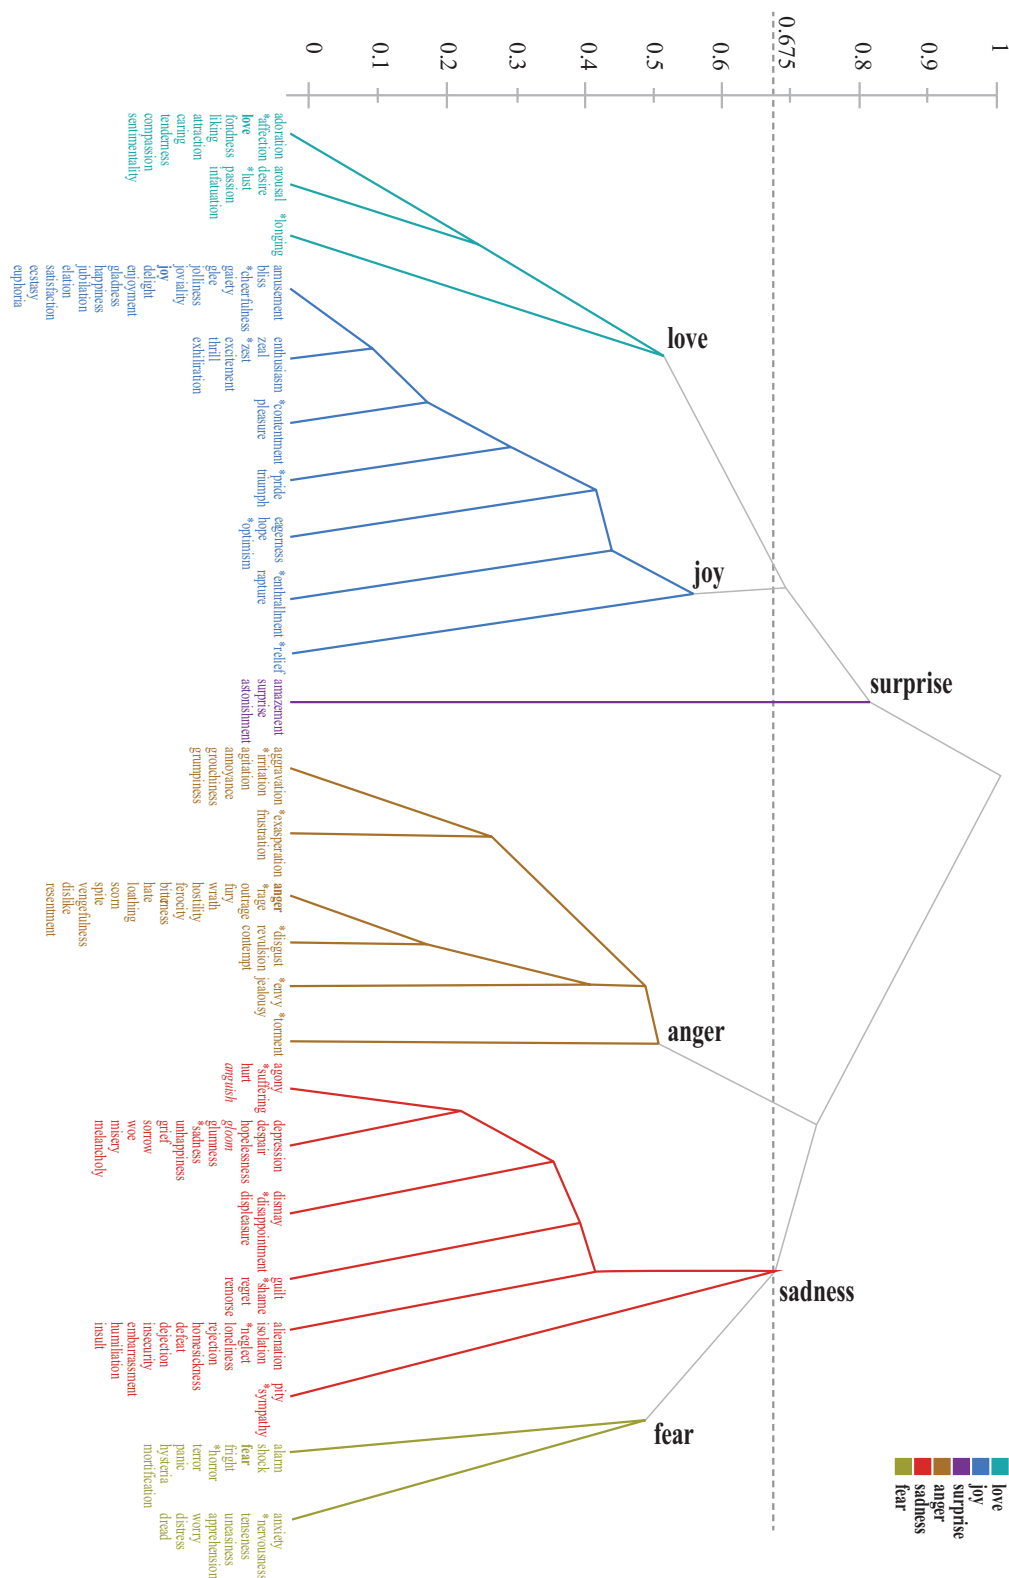

Figure 3: Shaver's Error! Reference source not found. dendrogram of 135 emotion words, modified to add color coding by primary emotion category. Asterisks indicate subcluster labels, indicating subordinate emotions. The y-axis scale has been altered to replicate the [0, 1] range of our comparison dendrogram (Figure 4), and the cluster cutoff point required to reproduce Shaver's arrangement (0.675) has been added.

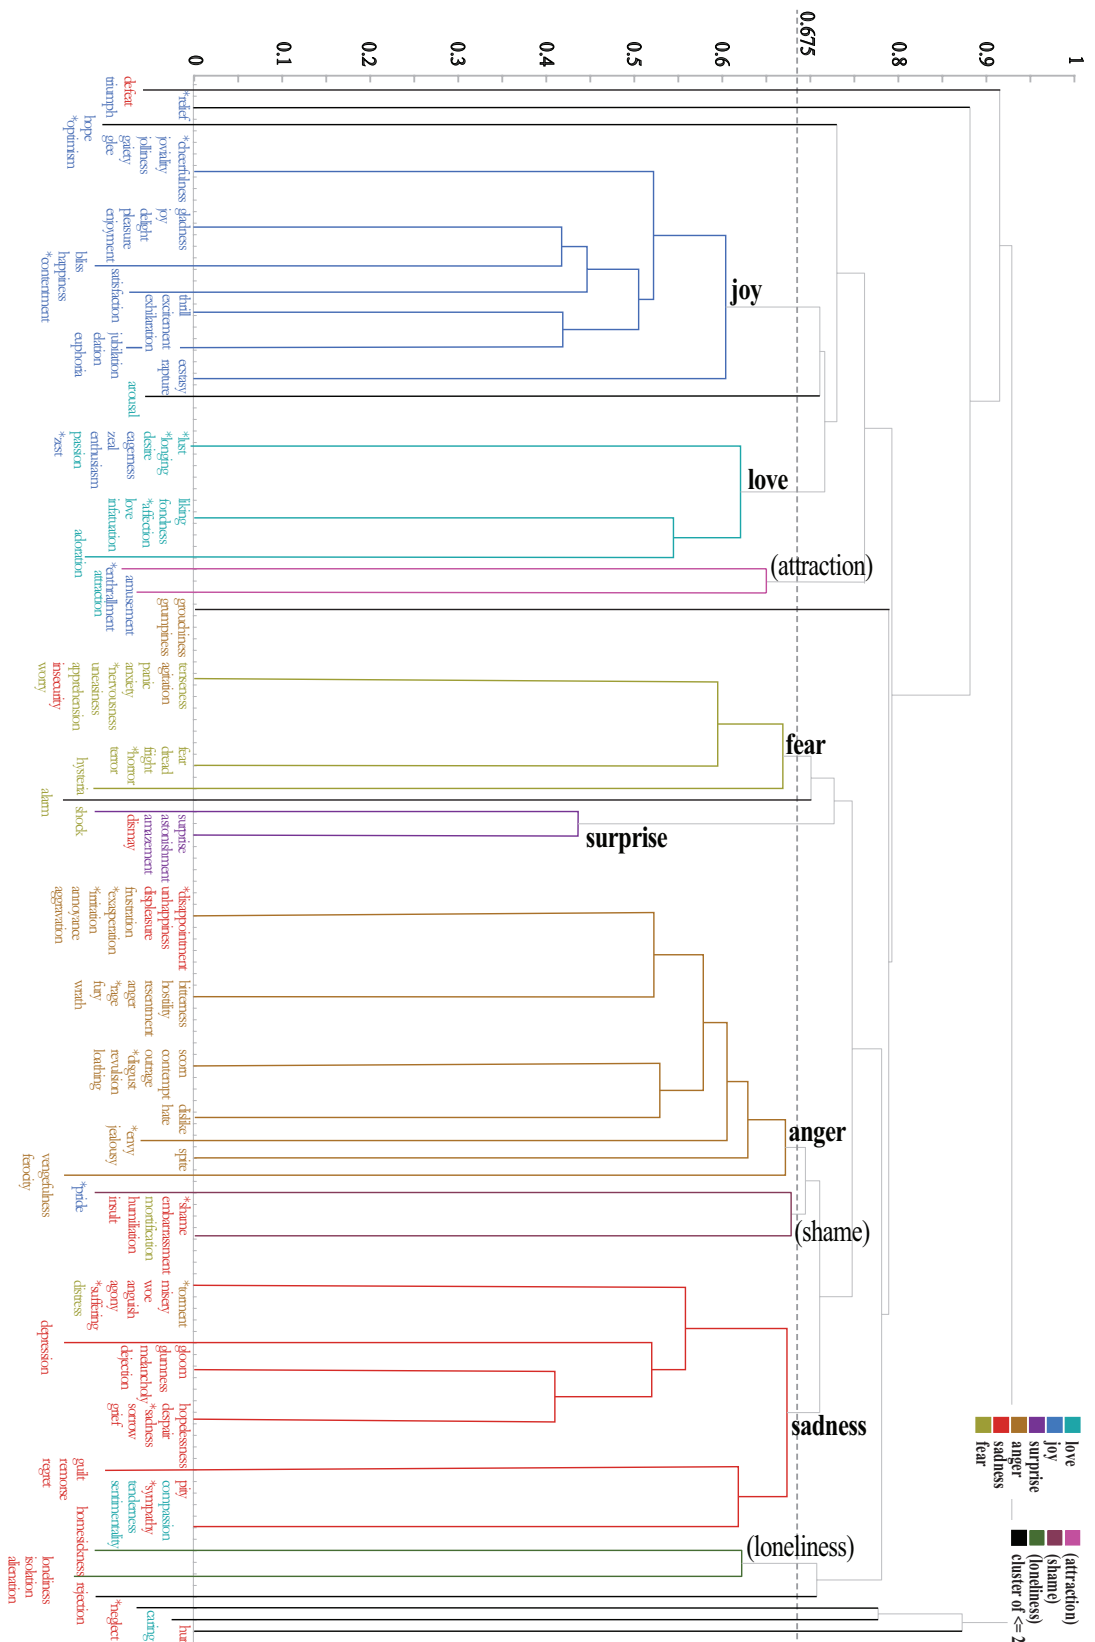

Figure 4: A dendrogram created using Shaver's Error! Reference source not found. 135 emotion words as input to our pipeline. Labels are color coded to match Shaver's clusters, as shown in Figure 3. Shaver's primary cluster labels are in bold black type; subcluster labels are prefixed with an asterisk. Additional primary clusters that emerged in our analysis are in parentheses (subclusters with two or fewer members were not considered). The cluster cutoff at 0.675 is indicated
